Summary

Frontend Developer with 5 years of professional experience building enterprise web applications. Skilled in JavaScript, React, ExtJs, and modern frontend workflows. Implemented and optimized applications for customer-facing websites. Led frontend development for complex multi-user VoIP dashboards. Developed and integrated Web CRM solutions with Salesforce. Always excited to learn new technologies and always striving to improve. Confident in my abilities but open to criticism and to being mentored.

Skills

- **Frontend:** JavaScript (ES6+), React.js, ExtJs, HTML5, CSS3, TypeScript, Next.js, Tailwind, Chrome extensions
- **Tools & Testing:** Git, REST APIs, Selenium WebDriver, JIRA, Slack
- **CRM & Integrations:** Salesforce, Web CRM

Professional Experience

Frontend Developer – Voipstudio.com [2020–2025]

- Maintained and optimized multiple React.js and ExtJs applications embedded in client websites by eliminating redundant re-renders, tripling load speed and enhancing user interaction.
- Optimized a high-traffic reception console dashboard, increasing performance by even up to 20× in case of larger clients, which allowed the console to handle dozens of simultaneous live calls.
- Led frontend architecture and feature roll-out for a multi-user VoIP dashboard, reducing feature deployment time by 25% and improving user engagement.
- Directed integration of Web CRM into Salesforce call center systems, streamlining data synchronization and automating task creation, increasing sales by 7%.
- Migrated Chrome extension CRM from Manifest V2 to V3, enhancing security protocols and ensuring cross-browser compatibility for 100% user adoption.
- Maintained and expanded automated test coverage across multiple applications, including end-to-end workflows, view-level tests, and targeted scenario validations with Selenium.

Projects

- Multi user cloud-based business phone system at voipstudio.com.
- [VoIP chrome extension](#), with chat and background work capabilities.
- React live chat widget embedded in customer websites, with activity tracking capabilities.
- React call widget, similar to a chat widget, but with VoIP, status, and activity capabilities.
- Weather app made with Next.js + TypeScript + Tailwind.

Education

Trade School in Web Development - Focused on JavaScript, Java, Servlets, MySQL
